WHY PURIFY?

DO NOT PRINT

Document needs updating.
Send a request to [Brainstorm](#).

Our bodies are made up of about 75% water, and all bodily functions and organs depend on a healthy supply of purified water to function optimally. Additionally, purified water is essential for the health of our skin, hair, nails and blood pressure. It is the job of water to deliver nutrients to our cells, as well as to flush toxins out of them. Keeping well hydrated not only boosts our energy levels, but it also helps weight loss, digestion and it promotes a general state of wellbeing. This is why you should look at the quality of the tap water your family is drinking.

UNDER-COUNTER WATER PURIFIERS

Purified water should be compulsory in every household and no kitchen should function without a water purification system. Our under-counter water purifiers are discreetly installed under your sink, fitted inline under the kitchen preparation bowl sink or to a separate dedicated purified water faucet. The US4 under-counter water purifiers can also be fitted off to supply purified water not only to your preparation bowl faucet, but also to the fridge and other appliances, for example an ice machine or water cooler. These popular water purifiers do not, unlike Reverse Osmosis water purifiers, waste a single drop of water in the treatment process and are surprisingly compact, taking up minimal space under the sink. Our unique GAC/KDF®/Riolyte® media bed treats up to 132 000 litres of water and removes a wide variety of chemicals and contaminants that are commonly found in the tap water, including chlorine, disinfectant by-products, heavy metals, pesticides, sediment and bio-debris. When purifying with our unique water purification systems, you're left with clean, healthy, great-tasting water.

BOTTLELESS DISPENSERS

DO NOT PRINT

Hydration is essential at the office and at home, because drinking the right amount of purified water keeps you healthy and productive. Directly connected to your main water supply, the bottleless dispenser is a convenient solution for both environments. No bottles and no hassle. The hermetically sealed compressor runs silently, which is ideal for the office and home environment. It's quick and easy to clean and requires minimal maintenance. Connected to an H₂O International purifier, you can enjoy healthy, great-tasting hot and cold water on tap.

FOOD WASTE DISPOSERS

DO NOT PRINT

Food waste disposers help recycle kitchen waste. Our quality, continuous feed food waste disposers are able to handle large quantities of waste produced in a domestic kitchen. It's the most convenient way to dispose of food waste in the kitchen. Not only are these products super convenient, but they are hygienic too. Nearly 20 per cent of residential waste is classified as food waste, so why not eliminate it from our landfills completely and contribute to making the world a greener place? Streamline your kitchen with these nifty and eco-friendly appliances.

HOW OUR POPULAR WATER PURIFIERS WORK

DO NOT PRINT

Document needs updating.
Send a request to Brainstorm.

- 1) **5-Micron filter pad** – Blocks organic and inorganic suspended solids, like sand and bio-debris.
- 2) **KDF®** – Removes iron, aluminium and heavy metals like lead, arsenic, cadmium and mercury.
- 3) **5-Micron filter pad** – Blocks rust, clay, algae, etc.
- 4) **Granular Activated Carbon (GAC)** – Effectively removes chlorine, highly carcinogenic by-products, pharmaceutical waste, pesticides and hundreds of other chemical and organic contaminants.
- 5) **Riolyte®** – Beneficial minerals that make the water slightly more alkaline and very palatable.
- 6) **Silver impregnated GAC** – Anti-bacterial silver protects against biological activity from backward contamination.
- 7) **5-Micron filter pad** – Blocks silt, sediment, etc.
