INTRODUCTION

Welcome

DO NOT PRINT

Document needs updating. Send a request to Brainstorm.

Purified water should be compulsory in every hotel, restaurant and guesthouse. No kitchen should function without a water purification system.

We're offering water purification solutions specifically aimed at the hospitality industry to reduce plastic usage and for you to save on your monthly bottled water bill.

Our industry experts have curated a selection of products to facilitate your decision making process. Our wide range of water purifiers, dispensers, faucets, drip trays and glass bottles lives up to the highest industry standards. Water purifiers can be T'd off to supply purified water not only to your preparation bowl faucet, but also to a fridge and other appliances, for example an ice machine or coffee machine.

At H2O International, we believe in a zero wastage system. Unlike reverse osmosis water purifiers, our compact water purifiers do not waste a single drop of water in the treatment process.

Our unique GAC/KDF®/Riolyte® media bed removes a wide variety of chemicals and contaminants that are commonly found in tap water, including chlorine, disinfectant by-products, microplastics, heavy metals, pesticides, sediment and bio-debris.

Follow the steps and compile a water purification solution to suit your needs.

OUR PROCESS

water solution

Customisation steps

Our experts have designed two customised ways to put together a water purification system to suit your needs:

LESS CUSTOMISATION: MORE CUSTOMISATION: STEP 1: STEP 1: Document needs updating. Send a request to Brainstorm. Brand your own water bottles Brand your own water bottles STEP 6: STEP 6: Enjoy your own purified

water solution

* CO2 cylinders are not included with product sale. Please ask your H₂O International franchisee for a trusted reccommendation.

STEP 1

LESS / MORE CUSTOMISATION:

Select your water purifier

This range of water purifiers caters specifically to the hospitality industry. These purifiers are installed inline to provide your chosen tap, faucet or dispenser with purified water.

Our high capacity purifiers require minimal maintenance; sediment cartridges are changed every 6 months and the filter media every 36-48 months.

US4-S-IL

- Maximum Expected Capacity: 132 000 ℓ
- GAC/KDF®/Riolyte® sealed cartridge unit with replaceable sediment pre-filter
- Flow rate: 3.8 7.6 ℓ/min

RV-US4-S-IL

- Maximum Expected Capacity: 66 000 ℓ
- GAC/KDF[®] sealed cartridge unit with replaceable sediment pre-filter
- Flow rate: 3.8 7.6 ℓ/min
