WATER WITHOUT THE WORRY

These days, more and more people are turning away from tap water because they're concerned about the chemicals and contaminants which can be found in it. Added to this, the taste is often unpleasant.

The simple solution is to enjoy the finest purified water straight from your tap by installing an H<sub>2</sub>O International SA water purifier. Not only does it taste great, it's convenient and far cheaper than water bought from the supermarket.

Contact H<sub>2</sub>O International, SA's **no.1** purification company and make the right choice of water cooler or boiler, connected to your trusted purifier to ensure your family or colleagues only drink the very best purified water.

## HOW THE H<sub>2</sub>O SYSTEM WORKS

H<sub>2</sub>O International SA is the exclusive distributor in South Africa of the unique KDF® Process Media, which guarantees the removal of all harmful, unwanted contaminants from your municipal water supply. KDF Process® Media is used in a variety of pretreatment and primary treatment applications. It is generally used in place of, or in conjunction with, granular activated carbon filters, even carbon block or inline filters.

KDF Process Media extend the life of granular activated carbon (GAC) while protecting the carbon bed against fouling by bacterial growth. H<sub>2</sub>O International SA uses the finest quality coconut shell activated carbon which works beautifully with the KDF to produce the superior quality, great-tasting, purified water which H<sub>2</sub>O has become famous for.

KDF 55 Process Media is so effective it removes:

- ▲ Up to 98% of inorganic water-soluble heavy metals that are a concern to many public health officials and many consumers.
- ▲ In addition, KDF 55 Process Media controls microorganisms and reduces lime scale in problem areas like showers, tubs and bottles.
- ▲ KDF 55 Process Media even changes waterborne calcium molecules that inhibit scale buildup and improves the taste of some of your favorite beverages.
- ▲ Unlike carbon, KDF 55 Process Medium is truly bacteriostatic. The electrolytic field created by the redox process is an environment deadly to some microorganisms; it also creates hydroxyl radicals and hydrogen peroxides that interfere with the ability of some other microorganisms to function.

## REASONS WHY H<sub>2</sub>O INTERNATIONAL is SA's no.1 purification company

- ▲ Over 21 years' experience in improving the health and well-being of all South Africans
- ▲ Exclusive, internationally-renowned purification systems
- ▲ Over 450 products for the home, office, hospitality and agricultural industries
- ▲ More than 60 franchisees and distributors across Southern Africa
- ▲ Dedicated service teams committed to all our customers
- ▲ We 100% guarantee the purity of every drop you drink once installed correctly and connected to the specified H<sub>2</sub>O International water purifier
